## **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with H. J. Staas on Thursday, April 19, 2007.

The application has been amended as follows:

In the abstract replaced the word "means" by -- device -- in lines 9-11 and 13.

In the abstract deleted the phrase "or the like" in line 16.

## Allowable Subject Matter

- 2. Claims 1-7 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:

The prior art of record fail to teach or fairly suggest with respect to claims 1 and 4, a flexure correction device for correcting deviation in position and/or orientation of a distal end of an arm due to flexure of a robot, comprising: reference flexure amount storage means storing a plurality of reference flexure amounts representing deviations in position and/or orientation of the distal end of the arm, which are measured at a plurality of positions in a robot operating area

10/809,373

Art Unit: 3661

under a plurality of load conditions different in weight; with respect to claim 6, a flexure correction method for correcting deviation in position and/or orientation of a distal end of an arm due to flexure of a robot, using an off-line programming apparatus or a robot controller, comprising the steps of: measuring flexure amounts representing deviations in position and/or orientation of the distal end of the arm at a plurality of positions in a robot operating area for each of a plurality of load conditions different in weight and/or position of center of gravity, and storing the measured flexure amounts in storage means as reference flexure amounts; selecting and designating one or more of the plurality of reference flexure amounts stored in the storage means in accordance with weight and/or position of center of gravity of a tool to be used; calculating a flexure amount for each of taught points in a robot operation program based on the designated reference flexure amounts using the off-line programming apparatus or the robot controller; and correcting position/orientation at each of the taught points based on the calculated flexure amount; and with respect to claim 7, a flexure correction method for correcting deviation in position and/or orientation of a distal end of an arm due to flexure of a robot using a robot controller, comprising the steps of: measuring flexure amounts representing deviations in position and/or orientation of the distal end of the arm at a plurality of positions in a robot operating area for each of a plurality of load conditions different in weight and/or position of center of gravity, in combination with the other elements and features of the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
